

Slovenian Keyboard

Slovenian Language Class 2017

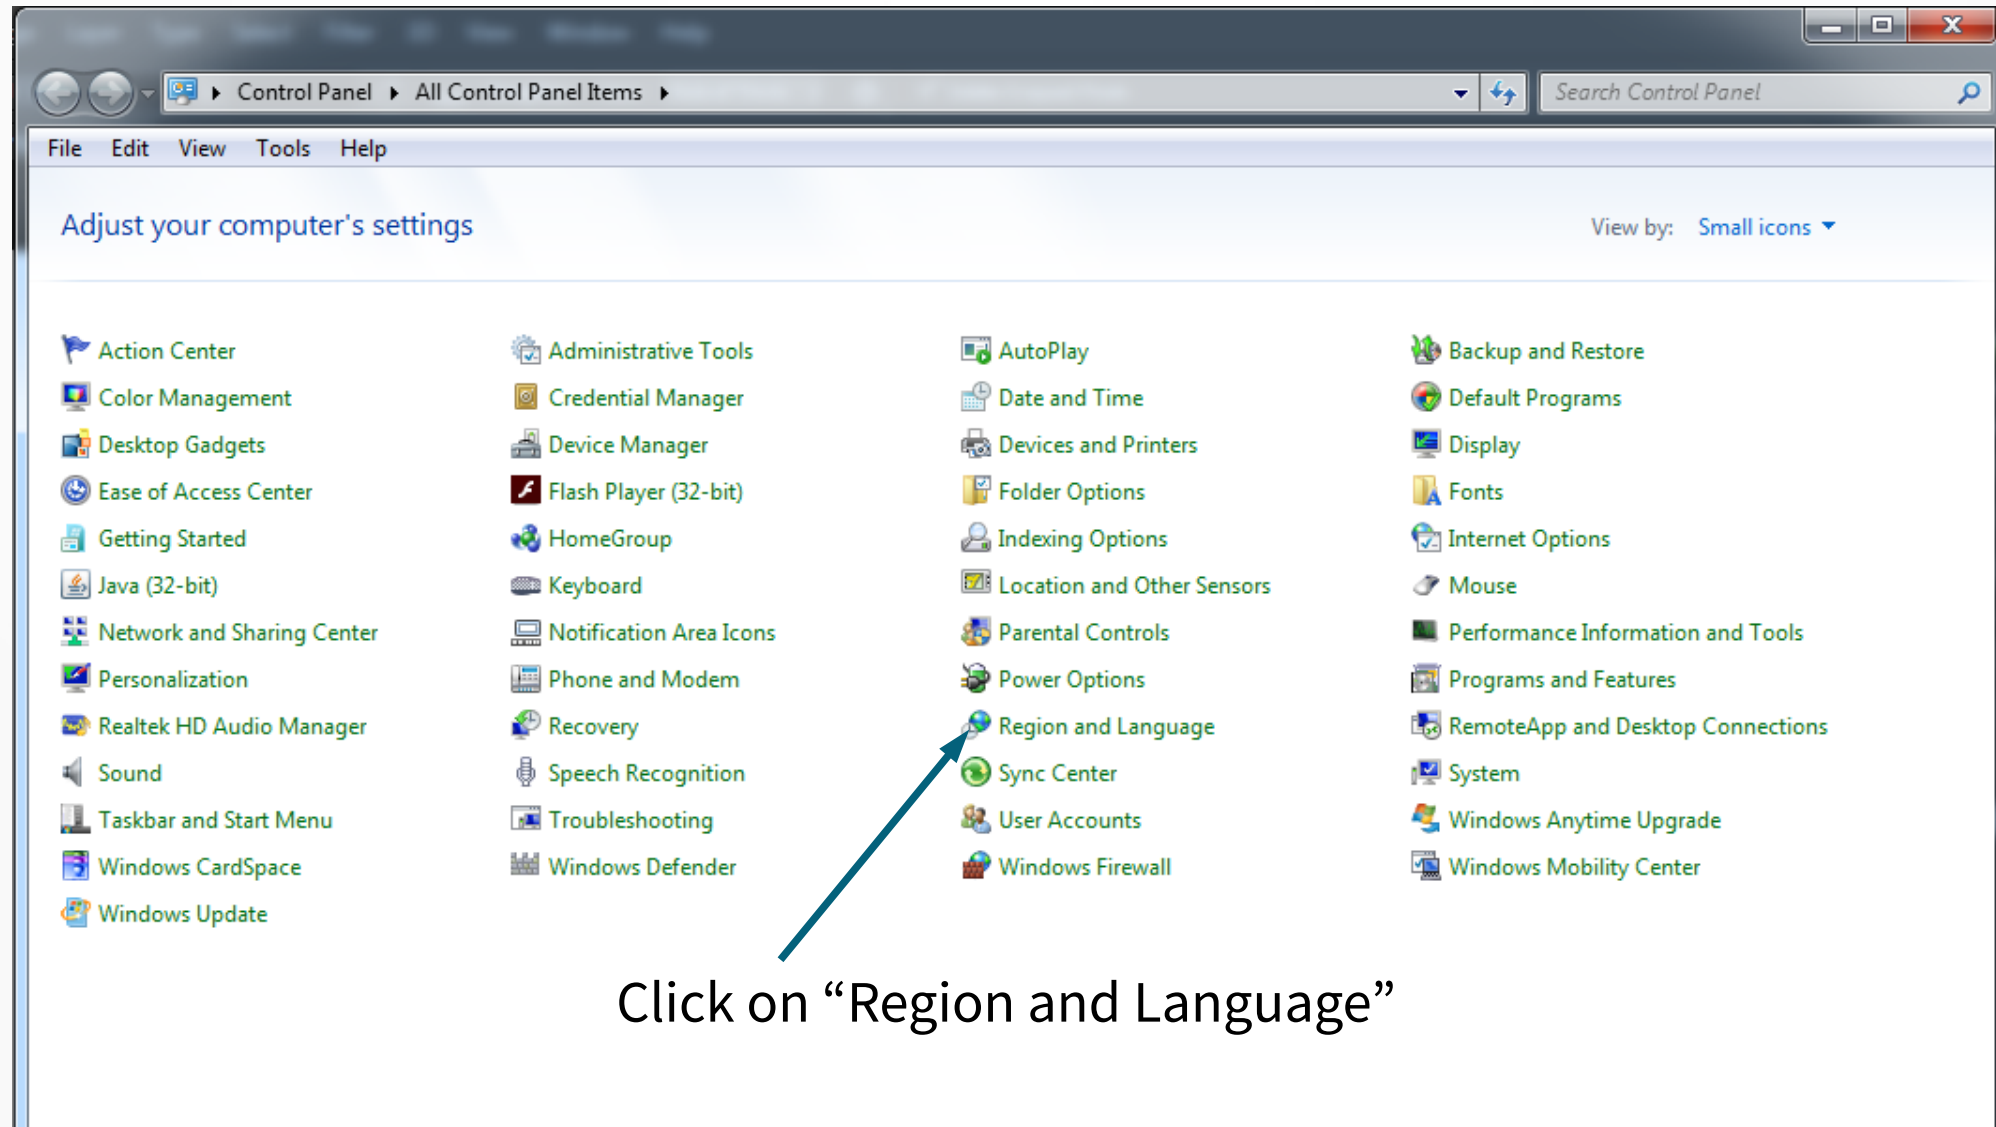

Keyboard Example

This example of defining additional keyboard layouts applies primarily to the “101 US Keyboard’s” used with many Windows based Desktop computers.

The additional layouts are a part of the standard Windows operating system.

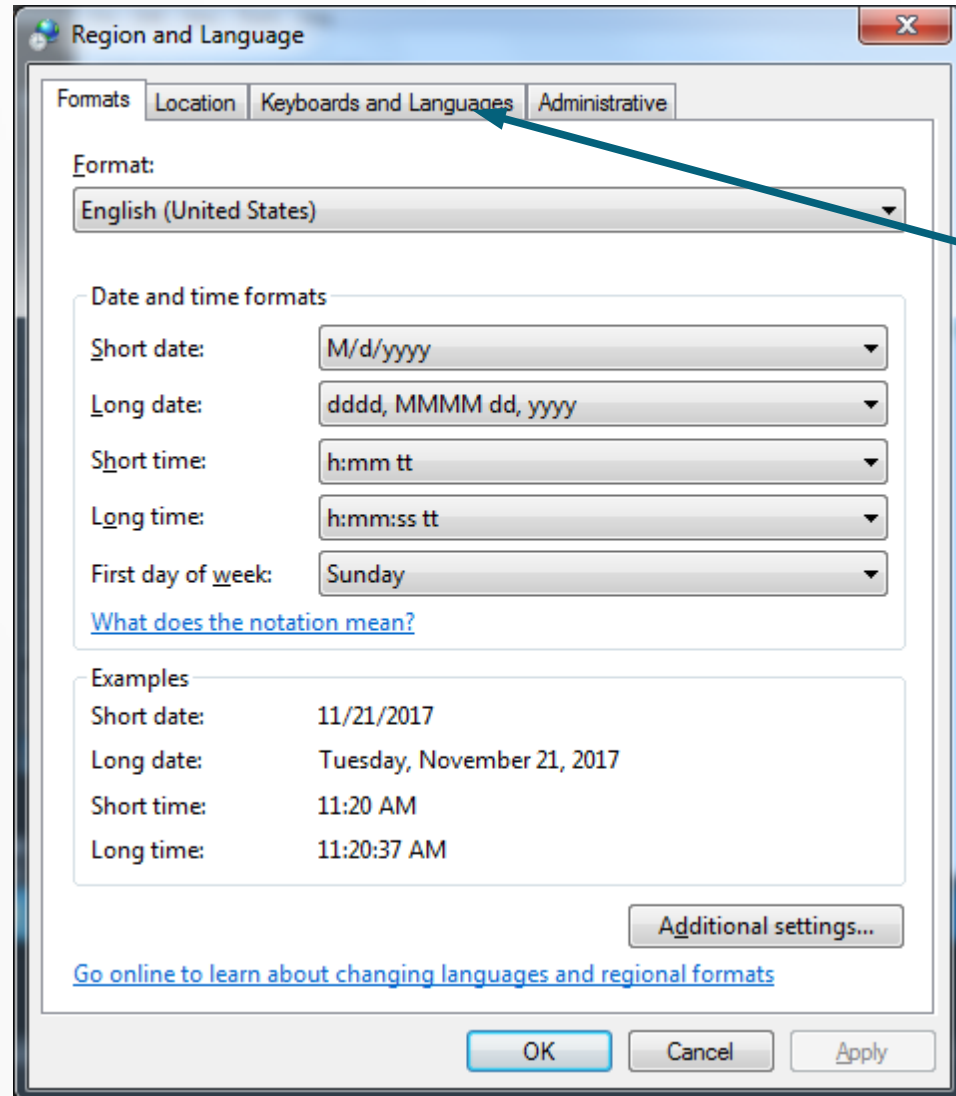

Windows Control Panel

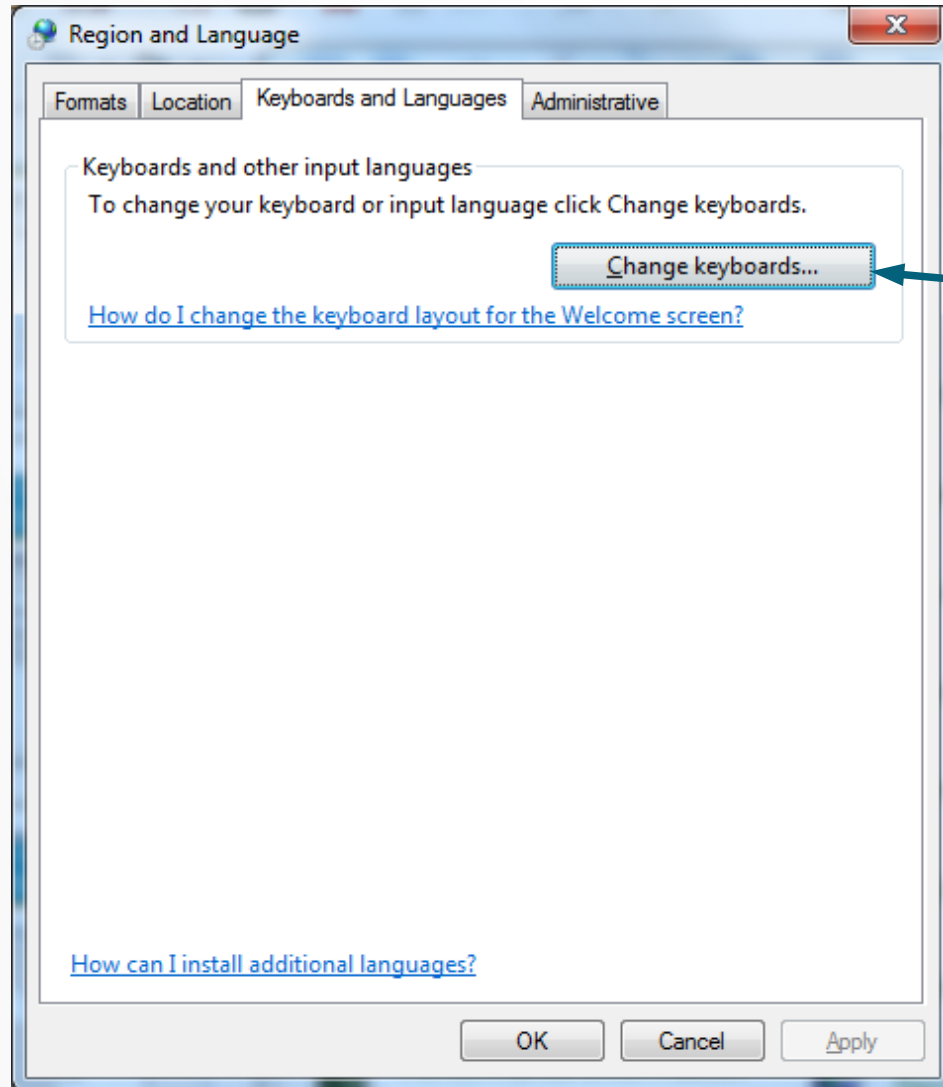

Keyboard Setup - Step 2

Click on "Keyboards and Languages"

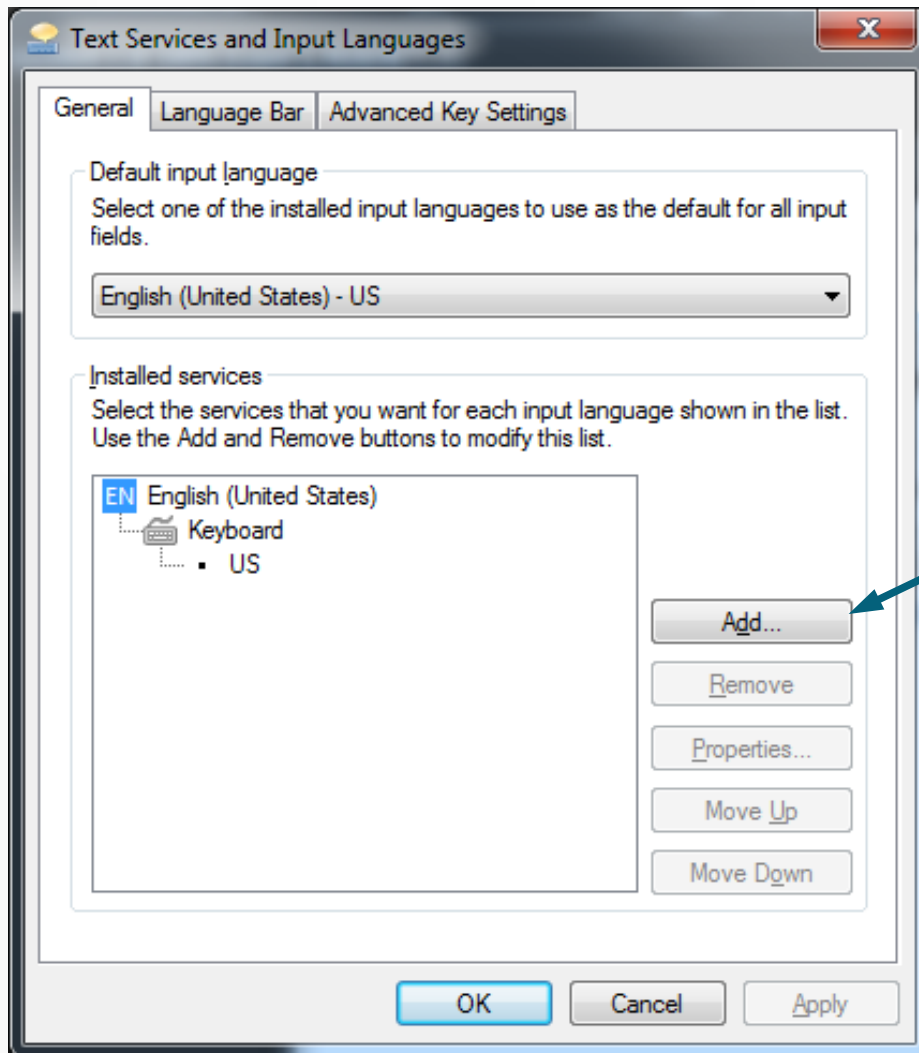

Keyboard Setup - Step 3

Click on "Change keyboards..."

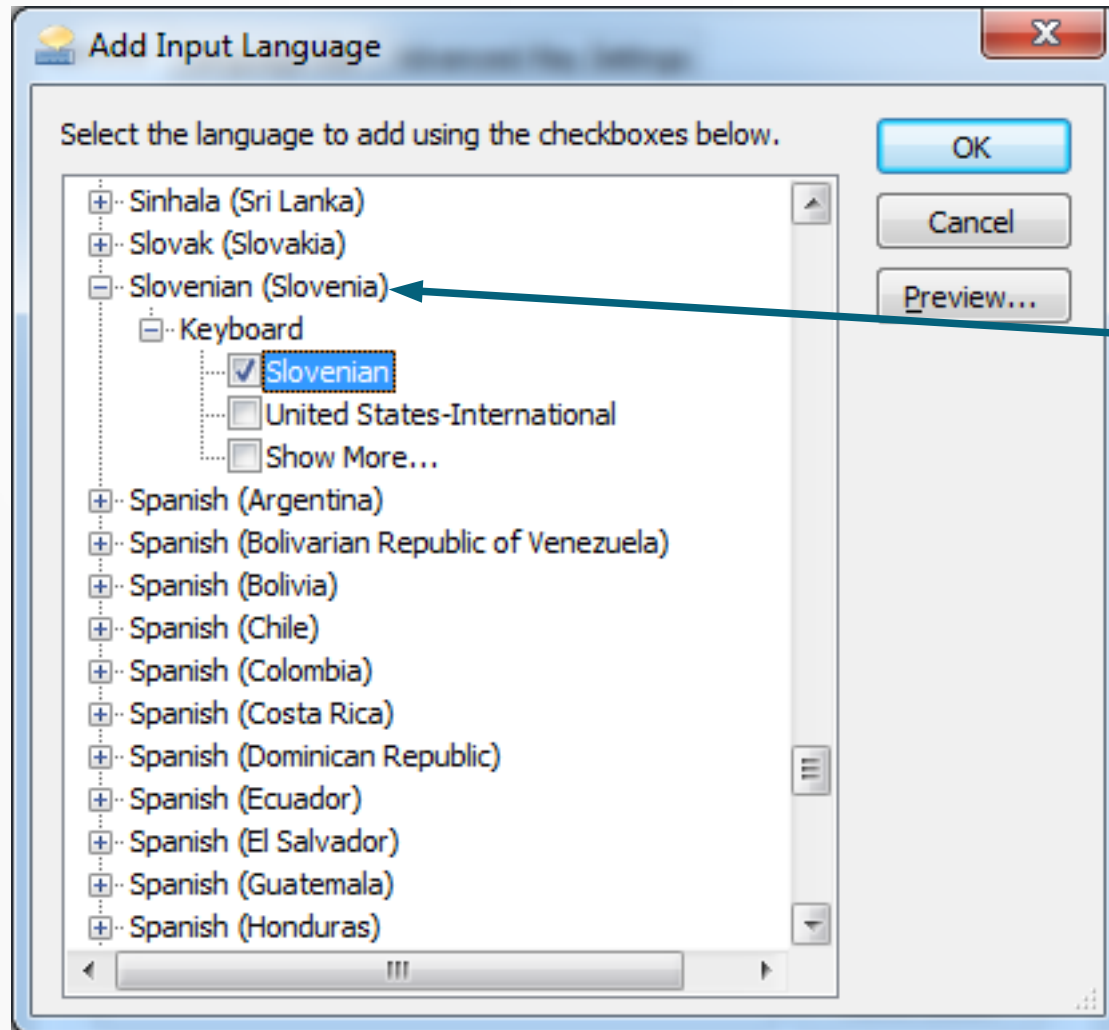

Keyboard Setup - Step 4

Click on "Add"

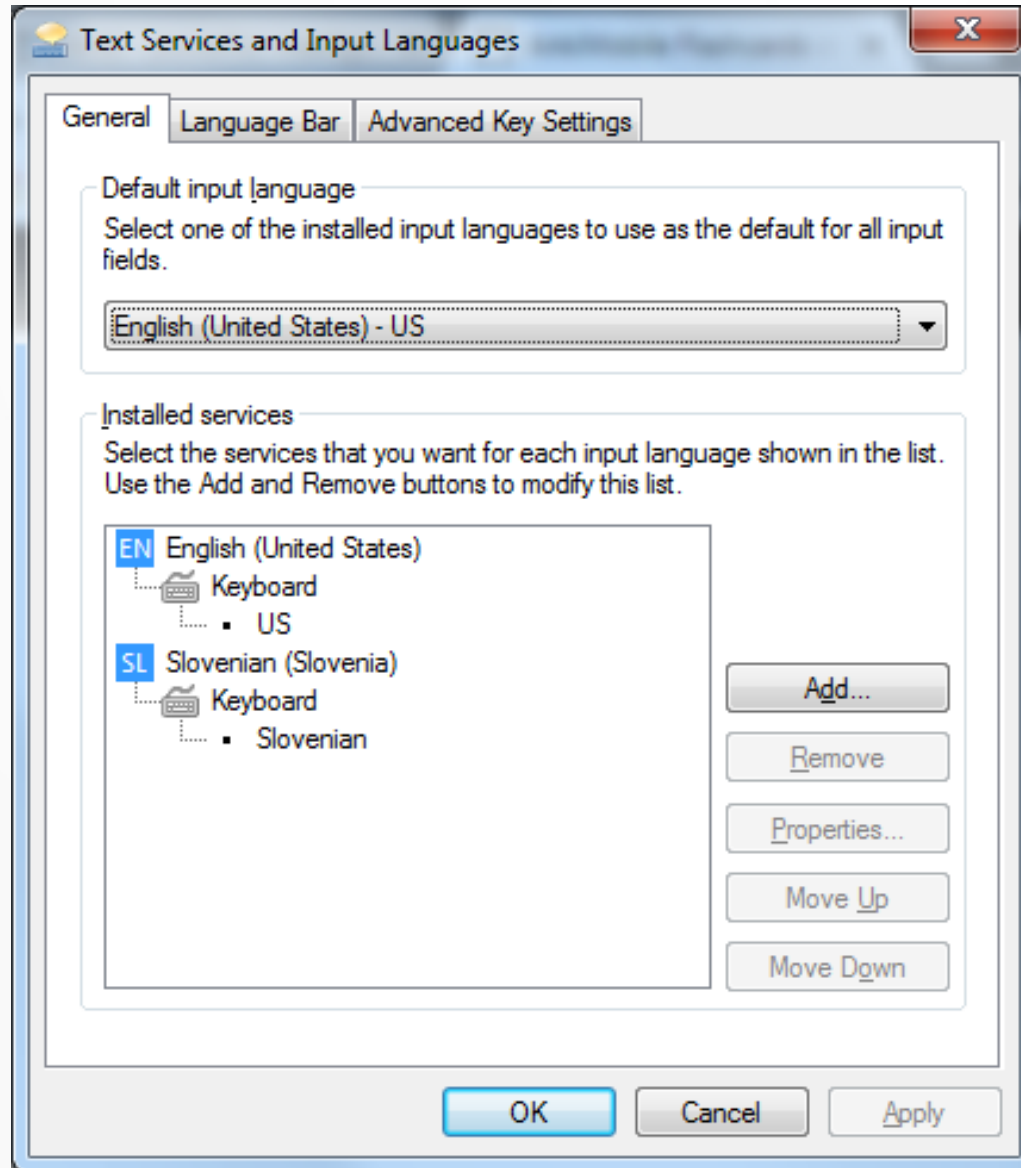

Keyboard Setup - Step 5

Expand “Slovenian” to show “Keyboard” and its selection List.

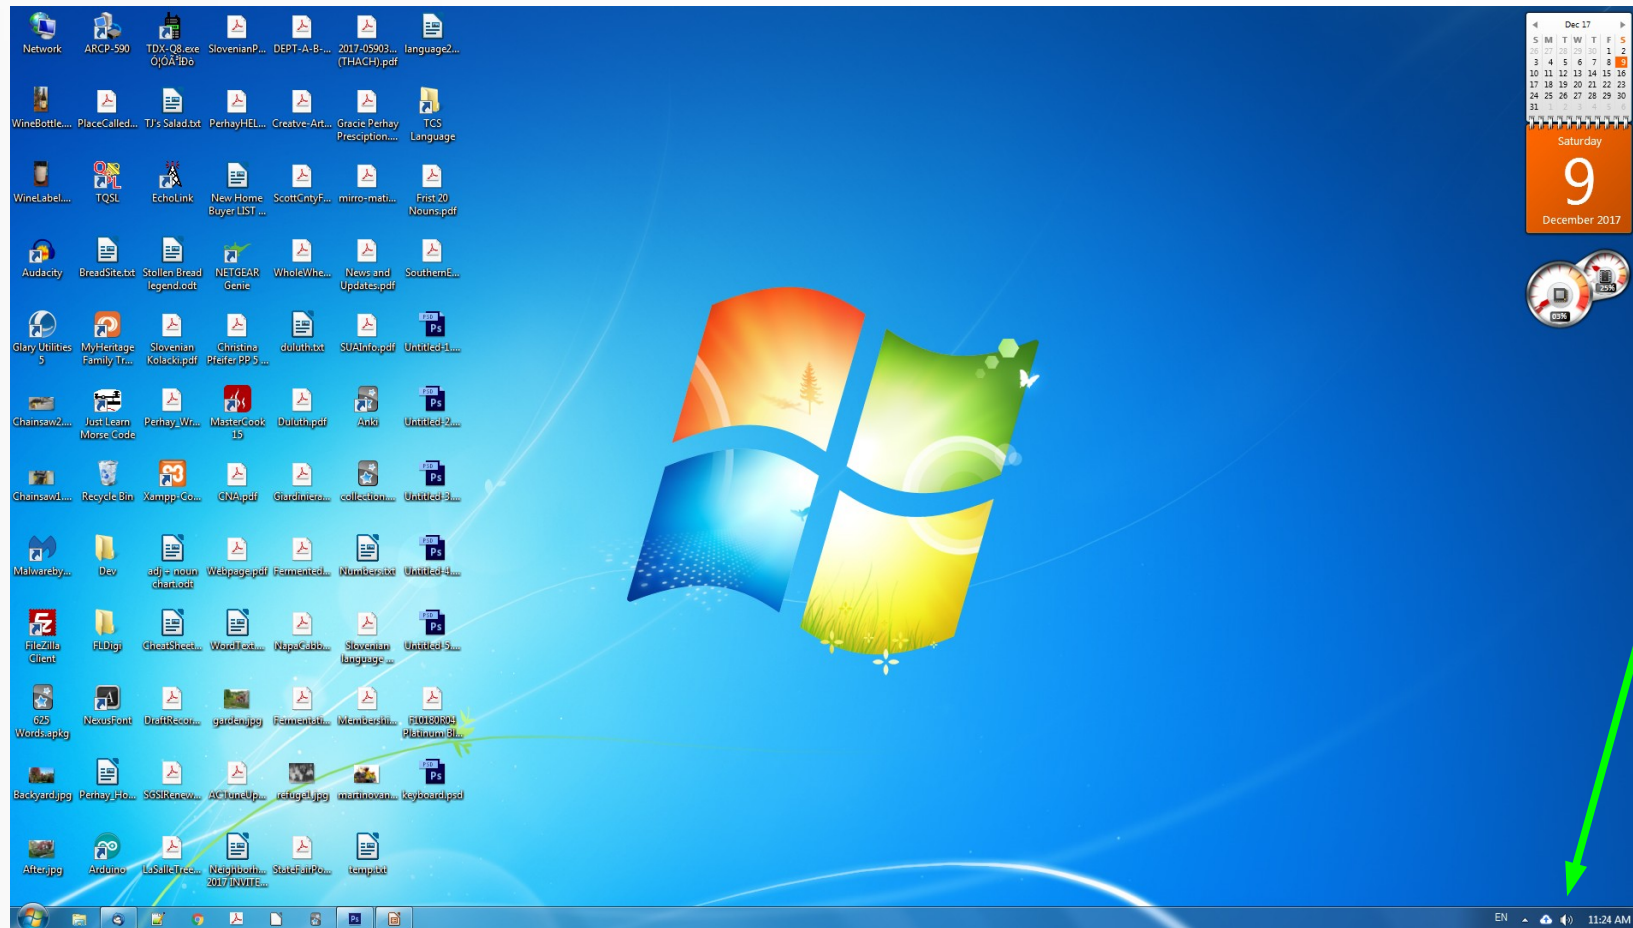

Keyboard Setup Complete

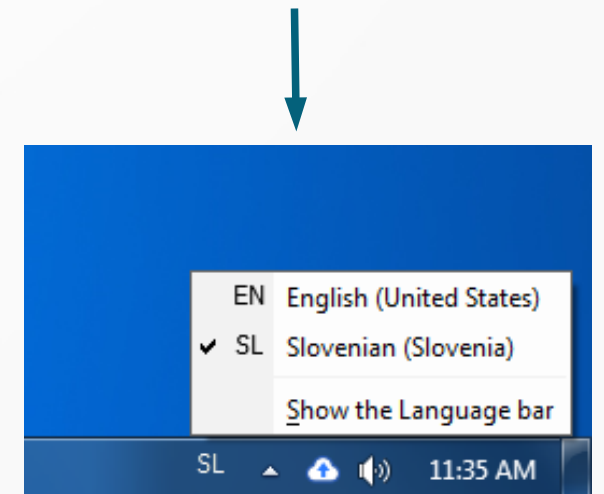

Ta-Da – Finished!

Using the 'new' Keyboard

When you click on the 'EN', your keyboard selection box will appear.

Slovenian Keyboard Layout

Note: In addition to adding the 'č', 'š' and 'ž', some of the other characters have moved – like the 'y', and 'z'. The keyboard shown is what is known as the “101-Key” keyboard that is most commonly used with desktop Microsoft computers. Yours may be different.
